To whom it concerns

## Certificate for Lars Philip Augusto Silven concerning psyciatric diagnosis

This boy has been evaluated several times during the period 2007-2010 and has been found to have the diagnosis Autistic Syndrome and severe language difficulties.

This has implications regarding several aspcts of the patients behaviour and abilities regarding social interaction and communication with others. He is in need of constant supervision and has no possibility to communicate with others. He has difficulties in endurance and this should be regarded for example in situations where long waiting hours can be expected.
